New water system is perfectly chilled

Flight Plastics UK have appointed AB Systems Ltd to design, supply and install the new chilled water system for the extrusion machines at their new Hampshire factory.

The 1200kW solution is to supply four extruders with the provision for an additional two in the future.

The equipment includes inverter driven pumps, energy efficient NovaFrigo RS/m chillers all centrally controlled and monitored from an HMI touch screen panel

This will all be installed and commissioned as a complete turnkey solution from design to commissioning
