

MOTAN COLORTRONIC LIMITED PRESS RELEASE

Chilling News

The new Reglochill chillers – a further enhancement of the Regloplas range – are now available.

The RC2 is an air cooled condenser range for efficient cooling from 3-58 kW cooling capacity.

The RCW is a water cooled range for efficient cooling from 7-51 kW cooling capacity.

The DCW/DCG - a range of cooling batteries (free cooler) - is used for closed loop cooling systems with minimum water and electricity usage. Up to 70% savings are possible compared to traditional chillers. The range includes 45-1,400 kW cooling with pump capacities from 70-2,400 l/min.

The IES is the Integrated Energy Saving system (patented). This fully automated system, comprising of scroll compressor units with the unique addition of a high yield exchange battery, provides cold water at the production process 12 months a year, with the huge advantage of the use of a free water/air thermal exchange.

This system has proven to achieve up to 80% savings compared to traditional chillers.

The features and quality components are synonymous with the Regloplas brand.

The above units, as with the standard range of water and oil heaters, are carried on stock at Chesterfield.

“We are very pleased to be able to offer customers in the heating and cooling process a comprehensive range, along with a professional sales and after sales service” states Karl Miller of Motan Colortronic Limited.
