

MOTAN COLORTRONIC LIMITED PRESS RELEASE

ControlNet

As a leading supplier of system technology in plastics ancillaries, Motan Colortronic developed the ControlNet system.

The ControlNet is an Ethernet based integrated suite of controls and is designed to operate, manage and supervise every stage of the raw materials process.

LuxorNet, GraviNet and MetroNet controls for drying, blending and conveying can be used as stand alone controls or combined to form an integrated network.

Features include:

- Network technology using a common platform
- User accepted standards such as Ethernet, TCP/IP, HTTP and email
- Horizontal integration to communicate to other units
- Vertical integration - ability to link to and communicate to other windows based systems
- Operation and visualisation by system independent Motan Colortronic web panels
- Ease of use and flexibility due to open architecture
- Easy collection and handling of important dates and information (SPC)
