## **MOTAN COLORTRONIC LIMITED PRESS RELEASE**

---

### **ETA Plus**

We live in times of fundamental change. The population will grow to 9 billion people during the next 40 years.

The supply of resources, in particular water and supply of energy, will present us with unexpected price rises and challenges in the future.

“At Motan Colortronic our aim is to play our part with regard to intelligent energy saving solutions, with innovative products in the material handling industry” states Karl Miller.

ETA Plus, a further development of the patented world proven ETA heat reclamation system introduced in the mid 1980’s is such a solution, providing an energy efficient and reliable system, whilst ensuring consistent dryness of material at all times.

The ETA Plus saves up to 60% in energy compared to standard dryers with

1. Preheating of regeneration air with heat exchanger
2. Temperature controlled regeneration
3. Dew point controls
4. Insulated desiccant beds
5. Frequency controlled blower
6. Controlled air flow per hopper based on actual usage
7. Heating directly at the hopper
8. Preheating of dry air with heat exchanger

The Chesterfield Tech Centre is now fitted with an ETA Plus dryer for customer trials and demonstrations.
